

TECHNICAL DATA SHEET

FUR COLOR VL

CHARACTERISTICS

This product, mixed with NUOVA CONCIA BASE, is the result of different solutions. Experimented for a better performance and colouring uniformity in chamois items as nabuk, peccary and buckskin etc. which present on their surface faded or changed colours due to the repeated washings or light.

17 brilliant and natural basic colours: every one is mixable with each other.

These solutions are used either in water or in alcoholic mixtures.

Very good for softened skins, tint changes and transperents if re-colouring.

APPLICATIONS AND DOSAGES

These products are prevalently used by spray-gun.

Because of their high concentration it is recommended not to employ pure dyes, but dilute them by using NUOVA CONCIA BASE, thus enabling their penetration as well.

Prepare a mixture in the ratio of 1 part of product and 6 parts of water.

Then, add to this mixture some FUR COLOR VL (from 20% to 30%), until the desired tonality is reached.

It is preferable to treat first with the product a white piece of cloth or some paper.

After the solution is applied, grade with NUOVA CONCIA BASE (diluted with water) without FUR COLOR VL in order to obtain a better uniformity and colours anchoring.

DIRECTIONS

Keep far from source of heat and in well closed container.

Shake well before using.

Store: 12 months.
