

TECHNICAL DATA SHEET

IMPERMEABILIZZANTE CARBON

CHARACTERISTICS

Protective sizing for fabrics and starching substances based on resins modified to the fluorosilicones containing perchloroethylene.

Light Yellowish liquid;

Completely new formula for a new protecting sizing against stains, used for all garments fabrics like trousers, skirts, jackets, shirts etc..

A protecting coating is deposited on the individual fibers and prevents dirt and spots from penetrating the fabrics and thus facilitating the cleaning of the item.

The ability of perspiration of the fabric is not affected, the textile still preserves a good fit and becomes soft to the touch; excellent waterproof of winter clothes and ski wear;

APPLICATIONS AND DOSAGES

Applications:

In perchloroethylene cleaning machines

Dosages:

Prepare a spray solution with 15-20% of Waterproof Carbon and with 80-85% of solvent, it is important the solvent is new. This mixture is poured into the device and then sprayed onto the textiles (spray matic) previously washed and rinsed with distilled solvent and centrifuged for 3 minutes.

The jet of the nebulizer should be very low (200/300 ml /min.) so that the dose is not sprayed too quickly to facilitate a good spread on all sides of the garment (it is recommended that the treatment lasts less than 2 / 3 minutes).

Once the nebulization is finished, roll again the fabrics for 3/5 minutes and without spinning dry pass to drying, the first 10 minutes at 50° C, then increase the temperature to 65° C approx.

Recommended dosage: at least 30-40 ml per kg WATERPROOFING CARBON;

CHARACTERISTICS

Density at 20°C : 1,500

pH value: --

Ionogenity: --
